

UNITY Fetal RhD™ NIPT

100,000+ patients tested since 2020¹

For RhD- pregnancies:
Reduce unnecessary
intervention of RhoGAM

~40% “not detected”

40% of patients will receive a fetal RhD “not-detected” result, indicating that Rh_o(D) immunoglobulin will not be beneficial for the pregnancy²

“Noninvasive determination of fetal Rh status is now possible through the analysis of cell-free DNA in maternal plasma. Up to 40% of Rh D-negative pregnant women will carry an Rh D-negative fetus. **In this clinical situation, antenatal anti-D immune globulin [e.g., RhoGAM] administration is unnecessary**”

- ACOG Practice Bulletin #181

>99.9% accuracy^{3,4} across the diverse United States population

UNITY Fetal RhD NIPT determines the presence or absence of rare variants such as *RHD*(ψ) and *RHD-CE-D* hybrid genes.

THIS MATTERS.

These rare variants are more common in non-European populations:

45% of the Black population

carries the *RHD*(ψ) or *RHD-CE-D* hybrid gene that presents as Rh negative⁵

>10% of Asians

carry the *RHD-CE-D* hybrid gene⁶

First-of-kind testing. Backed by clinical data.

Outcomes study

medRxiv

Clinical performance of cell free DNA for fetal RhD detection in RhD-negative pregnant individuals from the US population⁶

July 2024

- 401 clinical outcomes
- 5 RHD(Ψ) + 5 RHD-CE-D hybrid genes detected
- 100% concordance

Outcomes study

OBSTETRICS & GYNECOLOGY

Cell-free DNA analysis for the determination of fetal red blood cell antigen genotype in alloimmunized pregnancies¹

July 2024

- 465 neonatal outcomes collected
- 100% concordance

Clinical validation

nature scientific reports

Validation of a non-invasive prenatal test for fetal RhD, C, c, E, K, Fya antigens⁴

August 2023

- >99.9% sensitivity, specificity, and reproducibility
- 100% concordance

Press Release

PR Newswire®

BillionToOne Announces Global Collaboration to Provide its UNITY Fetal Antigen™ Clinical Trial Assay in Johnson & Johnson Phase 3 Clinical Trial⁷...

December 2023

- Global collaboration with Johnson & Johnson

950+

clinical samples

with confirmed concordant outcomes, including fetal D-antigen^{3,4}

<0.1%

no-call rate

an informative result for nearly all patients^{3,4}

Webinar

Learn more about UNITY Fetal RhD NIPT from an OBGYN and MFM expert

Diagnostic level accuracy, enabling safe and reliable clinical decision-making

Next Generation Sequencing + proprietary molecular counting with QCT™ technology results in unparalleled detection and accuracy of fetal RhD

RhD- pregnant patients are missing a functioning *RHD* gene.

UNITY Fetal RhD NIPT can detect presence or absence of the *RHD-CE-D* hybrid gene, and *RHD*(Ψ) via cell-free DNA.

UNITY Fetal RhD NIPT goes beyond a detection assay. Patented molecular counting (QCT™) allows for detection of true fetal status, resulting in diagnostic-level accuracy.
